Web to pdf ios online

Create an account for free and start a new blank project. A decade ago the average US adult spent less than an hour on the mobile internet. Even if the experience goes smoothly enough, the high costs alone may lead you to question what sort of ROI you'd get from this kind of outsourcing. Native Native apps are the original, traditional apps that are built from scratch, specifically for the iOS and Android platforms. Essentially, there are two kinds of mobile apps you can build: Let's define these in a little more detail. They just aren't quite sure what native mobile apps can do for their brand. There are some benefits that are specific to MobiLoud though that both platforms share. Should you turn your website into native or hybrid apps? This is because of the aforementioned improved UX, and the fact that apps self-select for your most loyal users in the first place. The act of going to Google Play or the App Store is in itself an act of loyalty. Although the apps are 100% yours, published under your own developer accounts, our team can handle the often fiddly, technical job of getting the apps approved and published on the App Stores and communicate with them on your behalf. After the apps are launched, we handle all ongoing updates and maintenance of the apps as part of our license. First we are going to talk about why you should convert a website into an app - if you are already convinced, feel free to skip to Part 2 where we get into the meat of turning a website into apps. By 2018 this had grown to 3.6 hours, according to the 2019 Mary Meeker report. Let's look at what News and Canvas all have in common. Contents If you want to turn a website into an app - and reap the benefits of an upgraded mobile UX, higher engagement rates, and the business growth that flows from that - you're in the right place. Let's get started! Want to build mobile apps without the usual investment and months of development? If you want to read more about the different kinds of apps, check out our comprehensive guide, and this short essay on why native isn't usually necessary. 6 Reasons to Turn a Website into an App A lot of people are keen on building apps from their site, but pull short of full commitment to the project. 5 Ways to Convert a Website into an App There are 5 main routes to turning a website into apps. We'll look at the options for getting the job done - and explain why MobiLoud might be the route for you. Apps are the best opportunity to serve your most loyal users and make existing users more loyal through pushing them to download the apps and create that deeper connection. They have better access to standard device inputs like swiping and pinching, which also makes the experience better for the user. The 20% of users who will drive 80% of the engagement and revenue for your business. By building mobile apps you give these core users a "home" - an icon on their home screen, a more intimate enclosed experience, a direct route to your content with one tap. Step 1: Schedule a Consultation Call One of the great things about Canvas is how quick and easy it is to get started by requesting a demo with one of our app experts. Once I've got someone on the app they'll stay on the app and keep consuming our content - which is what we want! Simple flying isn't a unique case, we've seen loyalty and engagement go through the roof for many clients that decided to convert a website into an app with MobiLoud. That is the very top of the range - but in general you should not pay less than \$35-\$50 per hour or you risk sacrificing quality. Even relatively simple native apps take months to build, cost \$80,000+ for iOS and Android, and are a highly technical project. You'll know us by name, and we're never more than an email or Zoom call away. A social app built with Canvas that integrates everything from the web MobiLoud allows you to turn a website into apps while keeping everything from your site and having it work flawlessly in the apps. We've developed two distinct platforms to turn any website into an app - no matter the tech stack or CMS. News is for WordPress-based digital publishers and news sites to build native content apps just as good as BuzzFeed's or The New York Times. Converting a website into an app allows you to meet this expectation. You can achieve the same for your own website or web app by converting it to hybrid apps. Only having a website is fine if you expect people to just come to your site once or now and again, to check some specific piece of information for example. They will expect them. While many of these developers have seemingly affordable hourly rates in exchange for robust app development, their minimum project fees are quite high. Hybrid and web technology has improved vastly over the last five years though, and if you want to convert your website into apps that have similar functions and you build a good hybrid app then this is no issue. Pros Outsourcing frees up your team to focus on what they're good at Hiring a freelancer can be much cheaper than contracting an agency or building an internal team Outsourcing gives you a chance to find someone skilled in app development, which could produce better results Cons Vetting developers usually requires testing projects and a lot of research, which takes time. Their structure is generally large and expensive and you pay for it - but it might be worth it if budget is not an issue With a more robust process for development and testing, you're dealing with longer launch times Contracts will hold you to strict terms and limitations The more stakeholders involved from your side of the fence can create undue friction as opinions clash, processes differ, and so on Cost and Time In general, the high cost of working with an app development agency is risky. With mobile notifications tied to an app user's account it would also be possible to send personalised notifications notifying customers about their orders similarly to how Amazon does. As I looked through Clutch's list of top app development agencies, I noticed a trend. The advantages of native apps are that they generally offer the highest levels of performance if you need an app that will do a lot of intensive work - like Uber or Airbnb. While a site or web app is optimal for desktop users, picking up organic traffic, and serving new or first time users - mobile apps are for growing and serving your loyal, core users. We're going to give you six of the more important reasons to turn a website into an app. Hybrid apps are not "just" shells with websites inside of them though, from the user's perspective they can perform and feel just like native apps, and can use native components and features to give a great app user experience. All your site features work out of the box. Think about the typical experience of visiting a mobile website. You can alert users to new content, promote special offers, and update them with specific information like shipping updates, friend requests, and announcements. 33% of people under the age of 34 enable push notifications on their phones for various businesses and apps. Keep in mind that they will be billing for a lot of hours. Quora's iOS and Android apps are hybrid - and Amazon, Facebook, LinkedIn, Slack, Gmail and many others either rely on web views right now, or did in the past. Next they need to put in the URL, wait for everything to load, and finally they're on the site. 2. Frequent maintenance and updates are required to keep apps working, and it usually costs businesses many thousands of dollars per year in developer fees. This is a lot but technical talent does not come cheap. Use our components and library to connect web pages to PandaSuite.Export binary files for iOS & Android and publish to the app stores. We're going to cover all the possible ways to convert a website into an app. If you want to turn your website into an app that reflects a similar functionality and content to your site, and you don't need any crazy features beyond what your site does already - custom development through an agency is overkill. Of course you should have one. There is also the possibility of using React Native or another cross-platform technology that can cut down the effort and expense somewhat. You get more opportunities to deepen the relationship, staying top of mind and communicating effortlessly through push notifications. Chartbeat confirmed this with some interesting research. So the app is doing about 1.6 million screen views for them from 17,000 people. Canvas is popular with directories, eLearning sites, eCommerce stores, online communities, and startups. Example of a Canvas eLearning App Which is for what? When you turn a website into an app, you give yourself the opportunity to be in front of them at just the right time! The key is to use good App Store optimization for the keywords associated with your brand, so that you rank well for important search terms. Elearning platforms can share snippets of information on courses, promotions, and free content - and with mobile app notifications could give students individual updates about the courses they are enrolled in. Communities can use notifications to promote hot threads or discussions, drive users back into the app/site, and with personalised mobile notifications could alert individual users when they receive messages or requests like the Facebook app does The only way that you can get these benefits, and communicate with users so directly, is by converting your website into mobile apps. They do not 100% turn your site into apps, they just do this in a very limited way. Across all mobile devices, around 87% of mobile time is spent in apps, which jumps to 90% when just looking at smartphones. To say that people are accustomed to apps would be an understatement - they are a constant part of many peoples lives. The icons on our home screen cover many of our important day to day tasks and longer term goals - from fitness, personal finance and task lists, to social interactions, entertainment and education. As you already have your core platform, and you want to convert your website into an app - then hybrid makes far more sense. Mobile apps allow you to send notifications to everyone who has the app installed, no matter their operating system. What are the key challenges? Full service We take a proactive approach to support. Native apps make sense only if you need specific, native only features - and you have deep pockets. eCommerce app users return to online stores 50% more often within 30 days, and spend a whopping 18x more minutes per month shopping than their counterparts on the mobile web. Your website is great for the wide reach, immediate access, and ability to act as a "storefront" for your brand whilst serving new users and picking up organic traffic. Native apps are awesome, but there is nothing so special about them in this case that justifies the vastly higher costs in terms of both money and time. If you get lucky and find a great match, it can pay off, but if you get unlucky it can become a nightmare. Pros You start from scratch, so you can affect every tiny detail of the user experience You already know your core web product very well, and can leverage that into the app project No time wasted on educating your team members on your business's goals, customers, or style Repurpose your design workflow for the app, using similar milestones, checklists, etc You can revise your mobile app as much as you want during the build and afterwards Feedback and edits will go more smoothly as the team is accustomed to working together Better oversight of the project as your team resides in-house Cons The mobile app will take your team away from other projects and revenue opportunities Your web developers will have to learn how to code an app using a hybrid app framework (like Phonegap), learn React Native to build cross platform native apps with JavaScript, or you'll have to hire mobile app developers. What does converting a website into an app do that your site doesn't already? With MobiLoud apps, we've built integrations to support a wide range of monetization options, and we can advise you on the best strategy for you to earn a strong ROI! Reason to convert website to app #5: Push Notifications Push notifications are one of the greatest benefits of turning a website into an app. They also give you two additional channels to manage and maintain going forward which is a lot of extra work and money. The simple answer is that you should convert your website into hybrid mobile apps. If you don't have a firm contract in place, you could owe unexpected and unplanned fees Costs can become unwieldy if you don't set timeline goals and caps for the freelancer Cost and Time When hiring a freelancer, you not only have to think about the money you're directly putting into their bank account, you also have to think about how much hand-holding and participation this will require from you. The number of global smartphone users almost doubled over the latter half of the decade, shooting from 1.86 billion in 2015 to 3.6 billion in 2020. The growth hasn't petered out yet - with global smartphone users set to hit 4.3 billion by 2023. Source: Statista 2020 This growth of smartphone users has driven the staggering growth of the mobile internet in turn. If you were a well funded tech start-up, with a complex platform and an "app first" product strategy then native would likely be the way to go. The reason why apps are so popular is that they provide a much better user experience compared to a website. MobiLoud apps are built to create a clean, intuitive user experience Converting a website into an app lets you significantly boost your whole mobile UX. These tools can work OK for narrow purposes, and tend to create basic apps that are usable but lack any advanced features from the web, and restrict you to pre-built templates and themes. Reason to convert website to app #4: Apps can be a Key Source of Revenue When you convert a website into a mobile app, you're building a potentially fruitful revenue generator for your brand. You can monetize the apps through in-app advertising, eCommerce sales, subscriptions and in-app purchases. Double that to get apps on iOS and Android. Generally, they give you some software and leave you to figure it out, and will leave you waiting in their ticket support system for help and support. Plans range anywhere from \$20 - \$200 per month, but at the lower end of that you will barely get anything usable. They generally work by having you build a drag and drop app (the same as thousands of others except with your logo) - and then use RSS or an API to pull content in from your site and display it in the app. Unless you have a ton of developers with free time on their hands (unlikely), or you're willing to go on a hiring spree - it's best to look at other options. Hybrid apps allow you to convert your website into apps using purely web-based technology, and are essentially a native container (the native app part) that displays web content (CSS, JavaScript, HTML) when used. The truth is that a mobile-optimized site in 2021 is just a given. If you solve some specific ongoing problem or need, and you want repeat usage, there will be a certain portion of your target user base that would love you to build apps. The chances are, you can convert your website to mobile apps with one of our three platforms. From internationally renowned media organisations like Foreign Policy and Business Insider NL, to smaller entrepreneurial publishers like Deeper Blue and Simple Flying - and local news organisations like ParisExtra - News is the clear choice for building content apps with WordPress. Canvas is our general purpose platform for converting a website into an app - no matter the CMS or features. For now though, we're going to move on to how to convert a website to apps. We're going to answer the questions and more in this article, we're going to look at all of them, and go through the pros and cons of each. Firstly, the user has to be reminded of the brand, or have some specific need to seek it out. In 90% of cases, converting a website to apps the hybrid way is the right choice. The fastest and most affordable way to build a mobile app is to convert your existing site into native mobile apps. Pros Far cheaper than hiring developers, freelancers, or agencies Higher quality apps than you would get from a DIY app builder No restrictive templates, everything from your site will work in the apps including your theme and plugins Make a website an app in just a couple of weeks Do everything yourself, no code required Full service, personalised support, all the fiddly bits done for you Full featured and customizable apps Convert any website into mobile apps Cons Unable to access certain native APIs More expensive than some of the cheaper DIY app builders Let's take a look at how to turn a website into an app with MobiLoud in more detail. You can find platforms like Appy Pie and GoodBarber in this space, and other more specialised tools like AppPresser that focus on converting specific kinds of sites to mobile apps. Source There are other interesting monetization options available too. Why is this? Use a DIY app builder to create your app (hybrid) This is for anyone who wants to build their own app, doesn't have coding experience but has lots of time and wants to keep costs very low. Push notifications have become a regular part of life! (credit) When you convert a website into an app - you gain a valuable channel in push notifications. Why would you convert a website into an app? The daily active users are growing nicely and the uninstall rates are really low. Convert Web App to Mobile App The key point is that you can turn any website or web app into mobile apps with one of our platforms. Why MobiLoud? Hybrid apps will be at the lower end and native at the higher end, and the cost can also be significantly higher for complex apps. We've seen the differences between native and hybrid apps, and explained why the hybrid route is the superior choice The native route is more like building apps, then hooking them up to you website's backend - the hybrid route is more of a true conversion process because you can reuse what you have already built for the web. We'll go over all the options, including native, so that you can make the right choice for your business. Multiply 240 hours by two (to account for iOS and Android) and by your employees' average hourly rate and you'll get a sense for how much money you'll potentially spend on a relatively simple app. This is the route that big companies often take, since even with the significant expense it can be cheaper than hiring and more reliable than the freelance route. MobiLoud effectively gives you the kind of result you would expect from custom development, at a price that is comparable to DIY app builders, while handling all the tough bits for you. 3. We are also going to look at our website-to-app platform Canvas, and show why it is the best option in most cases. Turning your website into apps the hybrid way also puts you in good company. It's the same for eCommerce. We've seen these benefits show up as common factors that converted a website into apps with MobiLoud. Isn't a responsive mobile site enough? And obviously there's ad revenue attached to that as well with over 1.6 million screen views I'm getting with the apps. iOS developers work with Objective-C or Swift, while Android developers use Java and Kotlin. If you're not completely sure - get in touch with one of our app experts and they'll go through the whole process in depth. How can you go from website to app in the quickest, most affordable way possible? We combined this with a service that handles all the tricky parts like customization, submission and publishing on the App Stores, and ongoing updates and maintenance. For most, a project starts upwards of \$10,000 and \$20,000. Over that same period desktop usage slowly declined. Apps rode on the waves of both of these trends. Choose the mobile layout.Click Components and insert the Web Component to display web pages.Build new navigation and screens. There are differences in how they work but they all have essentially the same result - turning a website into apps. You get all the benefits we mentioned in the previous section of this article like the optimal app UX Monetization options A new loyalty and engagement channel Unlimited push notifications An impressive App Store brand presence You save tens of thousands of dollars compared to hiring agencies or freelancers, get better apps than you'd get from a DIY builder, and the apps update automatically with your site so there's nothing new to add to your workflow. While you can send push notifications from a website - they are limited. Simple flying converted their website into mobile apps through our News platform, and according to CEO Arran Rice: "We've only got around 17,000 users, but those users read on average 94 articles per month. During your demo, we will talk about your site, your goals, and what you want from an app. The downsides of native apps are the significant expense and time to market. The importance of a great mobile UX can't be overstated. Simple Flying make a good income from their in-app advertising in their MobiLoud apps, with Arran Rice confirming that: "94 articles per month for an average app user. You don't need to worry about this - we handle it fast and efficiently. This is in stark contrast to most other app builders. Turn a website into an app without losing anything from your site As we mentioned previously, most app builder platforms will not be able to integrate everything from your site, and will restrict you to their pre-built themes and templates. We'll go over our plans and all the options open to you, and you'll decide if Canvas is right for you. If you want apps that are a key part of your brand though and generate ROI for your business, they could end up a false economy. UX became the most important brand differentiator in 2020, and it's not getting any less key in 2021. Reason to convert website to app #3: Build More Loyalty and Engagement Another reason to convert a website into an app is that apps tend to drive more loyalty. Users who do so are proving that they are, or are at least primed to be, your biggest fans. Get a free a demo to learn how it works and if it's a good fit for your site. By converting a website into apps, you can get the best of both worlds for your business. You will only really be able to determine this if you are very development-savvy yourself Freelancer must be on-boarded and brought up to speed on your business and its goals You'll have to deal with a lot of back-and-forth with the freelancer, or you could end up with one that doesn't communicate at all until it's too late. 4. All workflows both in terms of publishing and ongoing work Cost and Time An example of how much this could realistically cost is the Scanrr app Infumium built for iOS devices. Push notifications have a much higher engagement rate compared with email, and you're not limited in reach like on social channels. When you convert a website to an app, there are many different ways that you can use them to boost engagement, no matter what niche you're in. eCommerce apps also drive 3x higher conversion rates compared than eCommerce stores on the mobile web. There's also the possibility to get featured on one of the App Stores, which can result in a rush of new users! When you turn a website into an app with MobiLoud, we make the often-challenging process of getting approved and published on the App Stores a breeze - handling everything for you and dealing with Apple on your behalf! Native vs Hybrid - Which Kind of App Should You Turn Your Website into? Not only did they find that loyalty is higher on mobile than desktop, but that app users specifically are far more loyal than visitors from any other channel. App Annie confirms this in their interesting piece on app loyalty: "Today apps are of paramount importance in gaining customer loyalty. Take Simple Flying for example, the world's leading aviation news site. Let's get started. For example, you could make a subscriber only app and package it as part of a membership plan, or create an ad-free version that users can pay a monthly fee to use. Make no mistake - when you convert a website to an app your apps will have plenty of opportunities to pay for themselves. In the case of turning a website into mobile apps, there is almost no case where a native app would make sense if you want apps that are similar to your site. For example: News Publishers can use both web push notifications and mobile notifications from a mobile app to alert past visitors and app users to new content, breaking news, and special offers eCommerce Stores can promote special offers, new products, and offer special discounts to drive up conversions. They also allow the highest access to the native features of the device - like the accelerometer, GPS and facial recognition for example - although web technologies are starting to catch up in this regard with the rise of progressive web apps. We'll be showing you step-by-step towards the end how to turn any website into an app with our platform, Canvas. (Source) This image of the Quora app illustrates how Hybrid apps combine both native and web elements in the app UI. We know this because of the many clients that moved to MobiLoud after wasting time and money with DIY app builders. But apps fulfil a different purpose. Not only does it look good, making you look more established and professional in the eyes of potential users, partners and investors - but Google Play and the Apple App Store can also become a new user/customer acquisition channel for you. Michael Hyatt & Company's App Store Presence (they used Canvas) People use the App Stores to search for products that they are interested in and solutions to their problems, just like they use Google on the mobile web. When inside the app - the native navigation and features make for a far smoother, slicker experience. If you do not then just hiring a software developer costs around \$20,000 on average, and that's before you've even paid them! This is beyond the means of most small and medium sized businesses. With MobiLoud Canvas, you can convert any type of site into native mobile apps. Hybrid You can think of hybrid apps as a cross between a website and a native app, hence the name. How to Convert a Website to Apps with MobiLoud Canvas in 15 Easy Steps We're going to give you an exact demonstration of how to turn your website into apps with Canvas, our hybrid app builder that can convert any website or web apps into iOS and Android apps no matter the CMS. Hire a freelancer to build the mobile app (native/hybrid) This is for those of you who want to outsource mobile app development to a developer with the right skillset, but want to avoid the price of working with an agency. Code the mobile app yourself (native/hybrid) This is for those of you with the ability to build an internal team capable of creating a mobile app. Hire an app development agency to create the app (native/hybrid) This is for businesses that want a hands-off approach by outsourcing app development to a dedicated agency. Why? We've added a table of contents so that you can easily skip to the part you're most interested in. When they are finally in they have to deal with the clunky navigation, and distractions from dozens of other tabs. Apps on the other hand offer a direct route from one simple tap, perhaps triggered by the icon on the home screen or a push notification. That's a good portion of potential users you can communicate with directly, straight to the highly visible lockscreen. Apps also are just better made for mobile devices. We're also going to be comparing Canvas to all the other methods of going from website to app, and laying out our reasoning for why you should choose Canvas to build mobile apps for your site. 1. 5) Convert a website into apps with MobiLoud (native/hybrid) We built and perfected MobiLoud over 8 years to fix the shortcomings of other website to app platforms, and developed tools that can convert any website into apps while keeping everything great from the web. Whether it's themes, plugins, or even custom integrations - if it works on your site it will work in the apps. Unless they've signed a legally binding contract, you are at the whim of their availability, which can make planning the launch of a mobile app difficult. What is MobiLoud? Pros Frees your team from the responsibility of developing the app Hiring an agency with extensive development experience guarantees professional results App development agencies understand app UI and UX best practices They will conduct deep research into your audience as well as the competition App development agencies will adhere to optimal project management practices Agencies that specialize in niche-specific apps reduce the learning curve Cons Their fees are high. Consumers spend the majority of their time on their smartphones in apps, and they expect brands they purchase from to have at least one app! We've also seen this time and time again with clients who decided to convert a website into an app with MobiLoud. News has been used by a wide range of content sites. The key common factor is that all these tools and platforms are intended for repeat usage. The repeat usage is key. Performance is a well-known potential downside to hybrid apps, especially if you want to build something very demanding from scratch like the next Spotify or Coinbase. Pros You can do it yourself (hopefully), without needing to learn to code or hire a developer Affordable for a small business You can get an app built and launched quickly, in under a month if you do everything right Cons Prepare to spend hours tinkering with templates and point-and-click interfaces Assume that there are features on your site that cannot be replicated in the apps You'll need to use their theme, not your own You have to fit your vision for the app in their prebuilt templates and it's not always possible, you will have very little flexibility Free plans come with restrictions on traffic, storage, analytics, customizations, and more Even with cheaper app builder plans, you're restricted in terms of design and layout If your site uses plugins or third party integrations, you will almost definitely be prevented from using those in the app Likely to produce apps with a "cookie cutter" look and feel Moving your app to another platform later could be difficult May be difficult to get your app on the app stores and the platform may not assist with this Support is generally limited There's the hidden "cost" of branding and ads from the app builder company Notes About Cost and Time For startup companies and small businesses, cost and time to launch an app will greatly factor into your decision-making process, which is why a DIY app builder might seem initially appealing. You can get the link to the PWA. Hybrid apps too have their costs, but they are generally 50-90% lower and time to market is faster. Then it's just a case of signing up and starting the app build. A lot of major tech brands have gone this route too. If however, you're interested in people coming back again and again and building a real lasting connection with your users - turning a website into an app will help you to achieve this. And this is assuming that you do have people with the technical skills to achieve this. The mobile internet was something of a legacy desktop paradigm that was bolted onto the new world of smartphones. Apps were native to the smartphone era though, and through the growth of device capabilities and mobile usage in general they left the mobile internet behind. If you take a browse Upwork, you'll see that the most expensive ones were in the \$250/hour range. That's going to cost your business as well. Because they already had the core platform on the web, and took the efficient and effective route to the app stores. It's a nice, almost passive income for the business as a whole! Moving on to eCommerce, we've seen that over the past several years, revenue through eCommerce apps have grown at an astounding rate - to the point where 78% of users would rather access a store via a mobile app compared to a mobile site. The average cost of an agency built app is somewhere between \$40,000 and \$80,000. We're going to show you why converting a website to apps is traditionally a difficult process, and why it's still worth it. Even if you cut out the microsite piece, you're still looking at roughly 240 hours for an app of this size. We want to give you the full picture though and help you to make an informed decision, so we will strive to be as objective as possible in this (rather long) guide.
